Introduction Quantum mechanics Quantum computations Grover search algorithm Shor's algorithm

# Classical cryptography Quantum computations

Ivan Murashko

#### Introduction

- Quantum mechanics
- Quantum computations
- Symmetric cryptography. Grover search algorithm (GSA)
- Public-key cryptography cryptography (RSA, Diffie-Hellman, Elliptic curve) and Shor's algrorithm.

#### Two-level atom

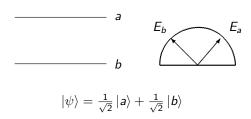

Figure: Energy measurement for two-level atom. The atom is in pure state:  $|\psi\rangle=\frac{1}{\sqrt{2}}\,|a\rangle+\frac{1}{\sqrt{2}}\,|b\rangle$ . Device can get either  $E_a$  or  $E_b$ .

#### Two-level atom. $E_a$ measurement

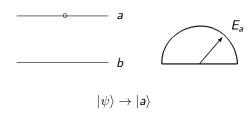

Figure: Energy measurement for two-level atom. The atom is in pure state:  $|\psi\rangle=\frac{1}{\sqrt{2}}\,|a\rangle+\frac{1}{\sqrt{2}}\,|b\rangle$ . Device got  $E_a$ . The following wave function collapse occurs as a result of the measurement  $|\psi\rangle\to|a\rangle$ 

#### Two-level atom. $E_b$ measurement

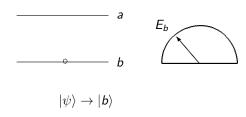

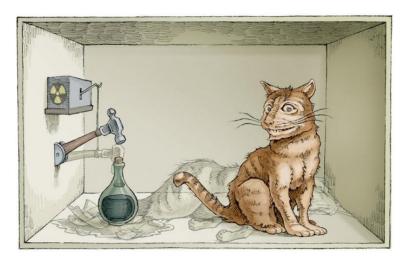

Figure: Energy measurement for two-level atom. The atom is in pure state:  $|\psi\rangle=\frac{1}{\sqrt{2}}\,|a\rangle+\frac{1}{\sqrt{2}}\,|b\rangle$ . Device got  $E_b$ . The following wave function collapse occurs as a result of the measurement  $|\psi\rangle\to|b\rangle$ 

## Schrödinger's cat

### Bell experiment. Classical case

$$f = \frac{1}{2} (ab + a'b + ab' - a'b'), a, a', b, b' \in \{-1, +1\}.$$

$$f \in \{-1, +1\} \text{ and } |\langle f \rangle| < 1$$

therefore  $f \in \{-1, +1\}$  and  $|\langle f \rangle| \leq 1$ 

#### Bell experiment. Quantum case

$$|\langle f \rangle| = \sqrt{2} > 1$$

#### Negative probabilities

$$\langle f \rangle = \sum_{a,a',b,b'} p(a,a',b,b') f(a,a',b,b').$$

therefore for  $|\langle f \rangle| > 1$  necessary to have

$$\exists a, a', b, b' : p(a, a', b, b') < 0$$

## Heisenberg inequality

$$\Delta p \Delta q \geq rac{\hbar}{2}$$

### Quantum logic

$$0 \bullet \underbrace{ \begin{array}{ccc} \Delta q_1 & \frac{\hbar}{3\Delta p} & \Delta q_2 \\ \bullet & & \end{array}}_{\bullet} \bullet \underbrace{ \begin{array}{ccc} \frac{2\hbar}{3\Delta p} & \Delta q_2 \\ \end{array}}_{\bullet} \bullet \underbrace{ \begin{array}{cccc} \frac{2\hbar}{3\Delta p} & \Delta q_2 \\ \end{array}}_{\bullet} \bullet \underbrace{ \begin{array}{cccc} \frac{2\hbar}{3\Delta p} & \Delta q_2 \\ \end{array}}_{\bullet} \bullet \underbrace{ \begin{array}{cccc} \frac{2\hbar}{3\Delta p} & \Delta q_2 \\ \end{array}}_{\bullet} \bullet \underbrace{ \begin{array}{cccc} \frac{2\hbar}{3\Delta p} & \Delta q_2 \\ \end{array}}_{\bullet} \bullet \underbrace{ \begin{array}{cccc} \frac{2\hbar}{3\Delta p} & \Delta q_2 \\ \end{array}}_{\bullet} \bullet \underbrace{ \begin{array}{cccc} \frac{2\hbar}{3\Delta p} & \Delta q_2 \\ \end{array}}_{\bullet} \bullet \underbrace{ \begin{array}{cccc} \frac{2\hbar}{3\Delta p} & \Delta q_2 \\ \end{array}}_{\bullet} \bullet \underbrace{ \begin{array}{cccc} \frac{2\hbar}{3\Delta p} & \Delta q_2 \\ \end{array}}_{\bullet} \bullet \underbrace{ \begin{array}{cccc} \frac{2\hbar}{3\Delta p} & \Delta q_2 \\ \end{array}}_{\bullet} \bullet \underbrace{ \begin{array}{cccc} \frac{2\hbar}{3\Delta p} & \Delta q_2 \\ \end{array}}_{\bullet} \bullet \underbrace{ \begin{array}{cccc} \frac{2\hbar}{3\Delta p} & \Delta q_2 \\ \end{array}}_{\bullet} \bullet \underbrace{ \begin{array}{cccc} \frac{2\hbar}{3\Delta p} & \Delta q_2 \\ \end{array}}_{\bullet} \bullet \underbrace{ \begin{array}{cccc} \frac{2\hbar}{3\Delta p} & \Delta q_2 \\ \end{array}}_{\bullet} \bullet \underbrace{ \begin{array}{cccc} \frac{2\hbar}{3\Delta p} & \Delta q_2 \\ \end{array}}_{\bullet} \bullet \underbrace{ \begin{array}{cccc} \frac{2\hbar}{3\Delta p} & \Delta q_2 \\ \end{array}}_{\bullet} \bullet \underbrace{ \begin{array}{cccc} \frac{2\hbar}{3\Delta p} & \Delta q_2 \\ \end{array}}_{\bullet} \bullet \underbrace{ \begin{array}{cccc} \frac{2\hbar}{3\Delta p} & \Delta q_2 \\ \end{array}}_{\bullet} \bullet \underbrace{ \begin{array}{cccc} \frac{2\hbar}{3\Delta p} & \Delta q_2 \\ \end{array}}_{\bullet} \bullet \underbrace{ \begin{array}{cccc} \frac{2\hbar}{3\Delta p} & \Delta q_2 \\ \end{array}}_{\bullet} \bullet \underbrace{ \begin{array}{cccc} \frac{2\hbar}{3\Delta p} & \Delta q_2 \\ \end{array}}_{\bullet} \bullet \underbrace{ \begin{array}{cccc} \frac{2\hbar}{3\Delta p} & \Delta q_2 \\ \end{array}}_{\bullet} \bullet \underbrace{ \begin{array}{cccc} \frac{2\hbar}{3\Delta p} & \Delta q_2 \\ \end{array}}_{\bullet} \bullet \underbrace{ \begin{array}{cccc} \frac{2\hbar}{3\Delta p} & \Delta q_2 \\ \end{array}}_{\bullet} \bullet \underbrace{ \begin{array}{cccc} \frac{2\hbar}{3\Delta p} & \Delta q_2 \\ \end{array}}_{\bullet} \bullet \underbrace{ \begin{array}{cccc} \frac{2\hbar}{3\Delta p} & \Delta q_2 \\ \end{array}}_{\bullet} \bullet \underbrace{ \begin{array}{cccc} \frac{2\hbar}{3\Delta p} & \Delta q_2 \\ \end{array}}_{\bullet} \bullet \underbrace{ \begin{array}{cccc} \frac{2\hbar}{3\Delta p} & \Delta q_2 \\ \end{array}}_{\bullet} \bullet \underbrace{ \begin{array}{cccc} \frac{2\hbar}{3\Delta p} & \Delta q_2 \\ \end{array}}_{\bullet} \bullet \underbrace{ \begin{array}{cccc} \frac{2\hbar}{3\Delta p} & \Delta q_2 \\ \end{array}}_{\bullet} \bullet \underbrace{ \begin{array}{cccc} \frac{2\hbar}{3\Delta p} & \Delta q_2 \\ \end{array}}_{\bullet} \bullet \underbrace{ \begin{array}{cccc} \frac{2\hbar}{3\Delta p} & \Delta q_2 \\ \end{array}}_{\bullet} \bullet \underbrace{ \begin{array}{cccc} \frac{2\hbar}{3\Delta p} & \Delta q_2 \\ \end{array}}_{\bullet} \bullet \underbrace{ \begin{array}{cccc} \frac{2\hbar}{3\Delta p} & \Delta q_2 \\ \end{array}}_{\bullet} \bullet \underbrace{ \begin{array}{cccc} \frac{2\hbar}{3\Delta p} & \Delta q_2 \\ \bullet \underbrace{ \begin{array}{cccc} \frac{2\hbar}{3\Delta p} & \Delta q_2 \\ \bullet \underbrace{ \begin{array}{cccc} \frac{2\hbar}{3\Delta p} & \Delta q_2 \\ \bullet \underbrace{ \begin{array}{cccc} \frac{2\hbar}{3\Delta p} & \Delta q_2 \\ \bullet \underbrace{ \begin{array}{cccc} \frac{2\hbar}{3\Delta p} & \Delta q_2 \\ \bullet \underbrace{ \begin{array}{cccc} \frac{2\hbar}{3\Delta p} & \Delta q_2 \\ \bullet \underbrace{ \begin{array}{cccc} \frac{2\hbar}{3\Delta p} & \Delta q_2 \\ \bullet \underbrace{ \begin{array}{cccc} \frac{2\hbar}{3\Delta p} & \Delta q_2 \\ \bullet \underbrace{ \begin{array}{cccc} \frac{2\hbar}{3\Delta p} & \Delta q_2 \\ \bullet \underbrace{ \begin{array}{cccc} \frac{2\hbar}{3\Delta p} & \Delta q_2 \\ \bullet \underbrace{ \begin{array}{cccc} \frac{2\hbar}{3\Delta p} & \Delta q_2 \\ \bullet \underbrace{ \begin{array}{cccc} \frac{2\hbar}{3\Delta p} & \Delta q_2 \\ \bullet \underbrace{ \begin{array}{cccc} \frac{2\hbar}{3\Delta p} & \Delta q_2 \\ \bullet \underbrace{ \begin{array}{cccc} \frac{2\hbar}{3\Delta p} & \Delta q_2 \\ \bullet \underbrace{ \begin{array}{cccc} \frac{2\hbar}{3\Delta p} & \Delta q_2 \\ \bullet \underbrace{ \begin{array}{cccc} \frac{2\hbar}{3\Delta p} & \Delta q_2 \\ \bullet$$

Figure: Heisenberg inequality. The event P is that momentum has uncertainty  $\Delta p$  Event  $P \wedge Q_1$  is that particle's position is between 0 and  $\frac{\hbar}{3\Delta p}$ . Event  $P \wedge Q_2$  is that particle's position is between  $\frac{\hbar}{3\Delta p}$  and  $\frac{2\hbar}{3\Delta p}$ . Particle's position for event  $P \wedge Q = (P \wedge Q_1) \vee (P \wedge Q_2)$  is between 0 and  $\frac{2\hbar}{3\Delta p}$ . The events  $P \wedge Q_1$  and  $P \wedge Q_2$  are forbidden by the Heisenberg inequality. From other side the event  $P \wedge Q = (P \wedge Q_1) \vee (P \wedge Q_2)$  is possible

### Quantum logic

Distributive law is failed for quantum logic:

- $P \wedge (Q_1 \vee Q_2)$  can be true
- but both  $P \wedge Q_1$  as well as  $P \wedge Q_2$  are false

in other words

$$P \wedge (Q_1 \vee Q_2) \neq (P \wedge Q_1) \vee (P \wedge Q_2)$$

where  $\wedge$  is "logical and",  $\vee$  is "logical or"

#### Classical bit vs quantum q-bit

Classical bit is either 0 or 1. Quantum q-bit is another case. It's a state  $|q\rangle=\alpha\,|0\rangle+\beta\,|1\rangle$ . I.e. as Schrödinger's cat it can be 1 (die) and 0 (alive) simultaneously

#### Classical computation

Figure: Classical computation. Input has a number x that consists of n bits. Output y = f(x) is the result that consists of m bits

### Quantum computations

Figure: Quantum computations should be reversible. We have a number x as input. The number consists of n q-bits. We also require to have a seed of 0 states (m q-bits). Output also have two parts: the result  $|y\rangle = |f(x)\rangle$  is described by m q-bits and initial state  $|x\rangle$  (n q-bits)

### Quantum computations

Classical case

$$x \rightarrow f(x)$$

Quantum case

$$|0\rangle |0\rangle + |1\rangle |0\rangle + |2\rangle |0\rangle + \cdots + |x\rangle |0\rangle + \cdots \rightarrow$$

$$\rightarrow |0\rangle |f(0)\rangle + |1\rangle |f(1)\rangle + |2\rangle |f(2)\rangle + \cdots + |x\rangle |f(x)\rangle + \cdots$$

#### Needle in a haystack task

Figure: Search in unstructured data array (search "a needle in a haystack"). Classical complexity is O(N)

#### Grover search algorithm. Scheme

Figure: Grover search algorithm. Complexity is  $O(\sqrt{N})$ 

### Grover search algorithm. Repeating element scheme

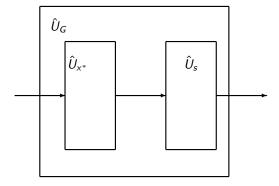

Figure: Grover search algorithm. Grover iteration

## Grover search algorithm. Main principle

Figure: Grover search algorithm. Phase inversion aka conditional inversion

## Grover search algorithm. Main principle

Figure: Grover search algorithm. Grover diffusion operator

### Impact on classical cryptography

$$O(N) o O(\sqrt{N})$$
 leads to the following recommendation  $AES_{128} o AES_{256}$ 

### Public key cryptography

- RSA and factorisation problem
- Diffie-Hellman and discrete logarithm
- Elliptic curve and discrete logarithm

### RSA and period-finding problem

$$N = p \cdot q$$
 $f(x, a) = a^x \mod N.$ 

The period of the function is T = 2r, i.e.

$$a^{x+2r} \mod N = a^x \mod N,$$
  
 $a^{2r} \equiv 1 \mod N,$   
 $(a^r+1)(a^r-1) \equiv 0 \mod N$ 

### Shor's algorithm

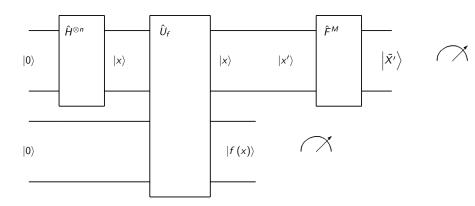

Figure: Period finding problem and quantum Fourier's transform

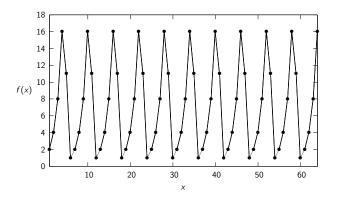

Figure: Shor's algorithm. Period funding problem for  $f(x, a) = a^x \mod N$ , a = 2, N = 21.

Figure: Shor's algorithm. Period funding problem for  $f(x, a) = a^x \mod N$ , a = 2, Value 1 is repeated with period of T = 6.

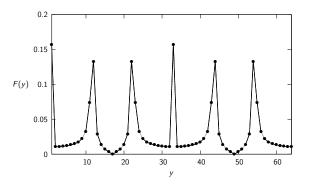

Figure: Shor's algorithm. Period funding problem for  $f(x,a)=a^x \mod N$ , a=2. Local maxima of Fourier transform are repeated with period  $\frac{M}{r}\approx 10.67$  (M=64 is the number of samples for Fourier transform). This gives us  $T\approx 6$ 

Local maxima of Fourier transform are repeated with period  $\frac{M}{r}\approx 10.67$  (M=64 is the number of samples for Fourier transform). This gives us  $T\approx 6$  and as therefore  $r=\frac{T}{2}=3$ .

As result (in our case)  $(a^r - 1) = 7$  and  $(a^r + 1) = 9$  have common divisors with N = 21: 7 and 3.

### Public key cryptography. Recommendations for key length

All key sizes are provided in bits. These are the minimal sizes for security. Click on a value to compare it with other methods.

Year	Symmetric	Factoring Optimistic	(modulus) Conservative	Discrete Key	Logarithm Group	Elliptic Curve	Hash
2015	78	1245	1350	156	1245	156	156
2016	79	1273	1392	158	1273	158	158
2017	80	1300	1435	159	1300	159	159
2018	80	1329	1478	160	1329	160	160
2019	81	1358	1523	162	1358	162	162

To resist until year 2017, you may consider using a minimum of 80-bit key for symmetric systems (e.g. AES-128) and a minimum of 1440-bit key for asymmetric systems (e.g. RSA).

#### Impact on public-key cryptography

• RSA: 4096

DH: 2048/256

• Elliptic curve: 512/256 (bitcoin)

NSA doesn't recommend elliptic curve cryptography for internal usage.
